

Core Knowledge

Topic/Skill	Definition/Tips						Example
1. Exact Values for Angles in Trigonometry		0°	30°	45°	60°	90°	
2. Sine Rule	<p>Use with <b>non right angle triangles</b>. Use when the question involves <b>2 sides and 2 angles</b>.</p> <p>For missing side:</p> $\frac{a}{\sin A} = \frac{b}{\sin B}$ <p>For missing angle:</p> $\frac{\sin A}{a} = \frac{\sin B}{b}$ <p>There is an <b>ambiguous case</b> (where there are two potential answers)</p>  <p>To find the two angles, use <b>sine</b> to find one, and then <b>subtract your answer from 180</b> to find the other answer.</p>						 $\frac{x}{\sin 85} = \frac{5.2}{\sin 46}$ $x = \frac{5.2 \times \sin 85}{\sin 46} = 3.75\text{cm}$  $\frac{\sin \theta}{1.9} = \frac{\sin 85}{2.4}$ $\sin \theta = \frac{1.9 \times \sin 85}{2.4} = 0.789$ $\theta = \sin^{-1}(0.789) = 52.1^\circ$
3. Cosine Rule	<p>Use with <b>non right angle triangles</b>. Use when the question involves <b>3 sides and 1 angle</b>.</p> <p>For missing side:</p> $a^2 = b^2 + c^2 - 2bc \cos A$ <p>For missing angle:</p> $\cos A = \frac{b^2 + c^2 - a^2}{2bc}$						 $x^2 = 9.6^2 + 7.8^2 - (2 \times 9.6 \times 7.8 \times \cos 85)$ $x = 11.8$

Core Knowledge

$$\cos \theta = \frac{7.2^2 + 8.1^2 - 6.6^2}{2 \times 7.2 \times 8.1}$$

$$\theta = 50.7^\circ$$

4. Graphs of Trigonometric Functions

$$y = \sin(x)$$

for  $0 \leq x \leq 360^\circ$

$$y = \cos(x)$$

for  $0 \leq x \leq 360^\circ$

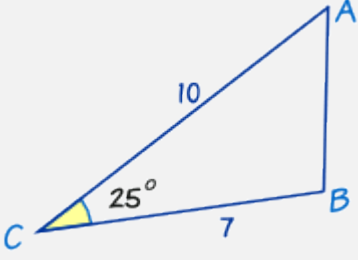

$$y = \tan(x)$$

for  $0 \leq x \leq 360^\circ$

Core Knowledge

5. Area of a Triangle	Use when given the <b>length of two sides and the included angle</b> .  $\text{Area of a Triangle} = \frac{1}{2}ab \sin C$	 $A = \frac{1}{2}ab \sin C$ $A = \frac{1}{2} \times 7 \times 10 \times \sin 25$ $A = 14.8$
