

Core Knowledge

Topic/Skill	Definition/Tips	Example
1. Area	The amount of <b>space inside</b> a shape.  Units include: $mm^2$ , $cm^2$ , $m^2$	
3. Area of a Rectangle	<b>Length x Width</b>	
4. Area of a Parallelogram	<b>Base x Perpendicular Height</b> Not the slant height.	
5. Area of a Triangle	<b>Base x Height ÷ 2</b>	
6. Area of a Kite	Split in to <b>two triangles</b> and use the method above.	
7. Area of a Trapezium	$\frac{(a + b)}{2} \times h$  “Half the sum of the parallel side, times the height between them. That is how you calculate the area of a trapezium”	
8. Compound Shape	A shape made up of a <b>combination of other known shapes</b> put together.	
9. Surface area	The total area of faces on a shape	<p>Surface Area of a cube = <math>6a^2</math></p>  <p>Surface Area of Cuboid or Rectangular Prism</p>  <p>Surface Area = <math>2lw + 2lh + 2wh</math></p>

Core Knowledge

	<p>Triangular prism – It could be one of 3 types – 1) equilateral triangle, 3 rectangles the same, 2) isosceles triangle with 2 rectangles the same and a different base 3) scalene triangle with 3 rectangles all different.</p> <p>The key is to identify the faces you have, label and colour them, write down formulae you need, calculate each then add together</p>	<h3>Triangular Prism – TSA Calculation</h3>  <p>The "Total Surface Area" =</p> $2 \times (6 \times 5) / 2 \quad : \text{Two Reds}$ $+ 2 \times (8 \times 7) \quad : \text{Two Yellows}$ $+ 1 \times (8 \times 6) \quad : \text{One Green}$ $= 2 \times 15 + 2 \times 56 + 1 \times 48$ $= 190 \text{ mm}^2 \quad \checkmark$  																
<p>10. Areas of similar shapes</p>	<p>Two shapes are said to be similar when you can multiply each edge length by a <b>scale factor</b> – a fixed number that when multiplied by the side-lengths of the smaller shape gives us the side-lengths of the bigger shape.</p>	<p>Finding Ratios in Similar Figures</p> <ul style="list-style-type: none"> <li>The trapezoids are similar. The ratio of the lengths of corresponding sides is 6 : 9 or 2 : 3.</li> </ul> <p>A. What is the ratio (smaller to larger) of the perimeters?</p> $\frac{2}{3}$  <p>B. What is the ratio (smaller to larger) of the areas?</p> $\frac{2^2}{3^2} = \frac{4}{9}$  <p>Then multiply the area of the smaller shape by the ratio in B (scale factor) to find the area of the larger shape</p>																
<p>11. Area unit conversions</p>		<table border="1"> <thead> <tr> <th></th> <th>mm</th> <th>cm</th> <th>m</th> </tr> </thead> <tbody> <tr> <th>mm</th> <td></td> <td><math>\div 10^2</math></td> <td><math>\div 1000^2</math></td> </tr> <tr> <th>cm</th> <td><math>\times 10^2</math></td> <td></td> <td><math>\div 100^2</math></td> </tr> <tr> <th>m</th> <td><math>\times 1000^2</math></td> <td><math>\times 100^2</math></td> <td></td> </tr> </tbody> </table>		mm	cm	m	mm		$\div 10^2$	$\div 1000^2$	cm	$\times 10^2$		$\div 100^2$	m	$\times 1000^2$	$\times 100^2$	
	mm	cm	m															
mm		$\div 10^2$	$\div 1000^2$															
cm	$\times 10^2$		$\div 100^2$															
m	$\times 1000^2$	$\times 100^2$
